# How To Create Your Own Kindle Insert

1. Open the Kindle Insert Template needed for your Kindle Model.

2. Delete the text as indicated on the template.

3. Search elements to find a background first. Some of my favorites to use are groovy, checkered, vintage, retro, and scrapbook. Drag the background you want into the frame. With the background selected, LOCK the background layer so that it remains unchanged. (You can always unlock it if you decide to change it)

tap to LOCK background

4. Then start layering different elements on top of the background. Search for elements like "groovy stickers", "book stickers", "dark romance" or anything that matches your vibe. Have FUN with this! Play around.

5. Play around with layers. You can find this under the "position" option in the toolbar.

6. When you're finished, tap the share button > download > choose file type PDF print > hit download.

*Tips for printing: make sure you print your design at **100% scale/scaling** - otherwise your print will fill the whole page and not be the correct size.*

Have fun!
